

WORKABOUT PRO 4

EQUIPPED FOR TODAY.

ADAPTABLE FOR
TOMORROW.

**TRUSTED.
MODULAR.
RUGGED.
FAST.
EASY TO USE.**

**The Workabout Pro 4 has
what it takes to get any
job done — now and in the
future.**

THE WORKABOUT PRO 4 HAS THE POWER TO TACKLE ANY TASK, TODAY AND TOMORROW.

In order to achieve maximum efficiency and deliver the very best in customer service, mobile workers inside and outside the enterprise need anywhere anytime access to your business information.

But choosing a mobile computer is a challenge. Mobile technologies are constantly evolving. And the features you require today will definitely change in the future.

Introducing the impressive Workabout Pro 4, the modular mobile computer that is built to adapt to changing business needs. Now, you'll never need to retire a mobile computer simply because you need new features. Instead, you can buy the features you need today, and add the features you need tomorrow in just moments, right in your own facility.

The result? A mobile computer that can meet your business needs every minute of its life. Guaranteed.

A unique modular design lets you add new features — in minutes.

The modular design of the Workabout Pro 4 lets you start with the features you need today, and upgrade to new features at any time, simply by switching modules. There is never a need to send the device back to a service depot. Simply replace the top end-cap or the back of the device, or insert an internal module, all right in your facility, in minutes.

With the Workabout Pro 4, you can start with Wi-Fi and add WWAN to serve a worker outside the four walls. Need to support a new type of bar code? Just swap scan engines. Want to add speech picking? No problem, a special end cap adds a headset jack. You can add support for any type of RFID or add GPS or an 8 MP camera. And the combination GPS/Wi-Fi diversity antenna module provides better Wi-Fi range and performance.

LIST OF AVAILABLE UPGRADE MODULES

End Cap Modules

- 1D standard range laser
- 1D extended range laser
- 1D linear imager
- 2D imager
- LF RFID
- HF RFID
- UHF RFID (linear antenna)
- Headset adapter module (provides a headset jack)

Back Cover Modules

- 1D standard range laser
- 1D linear imager
- 2D imager
- Camera module
- RFID: UHF (circular antenna)
- Pistol grip

Internal Modules

- GPS/Wi-Fi diversity module
- WWAN module

Custom

Need a special module for your application? Thanks to the open source architecture of the Workabout Pro 4, our partners can quickly, easily and cost-effectively create a custom module to meet your specific business needs.

IT CAN DO JUST ABOUT ANYTHING.

With its comprehensive feature set, the Workabout Pro 4 is ready to streamline virtually any task. Need bar code scanning? There are four world class bar code scanners to choose from: a 1D standard range laser for general bar code scanning; an extended range 1D laser that can capture bar codes as far as 45 ft./9.1 m away — ideal in multi-level warehouses; a 1D linear imager that can capture all 1D bar codes, including the new 1D stacked bar codes common in retail, grocery and manufacturing; and a 2D imager that can capture any 1D or 2D bar code. Since the Workabout Pro 4 is modular, you can choose the option that best meets your needs today, and upgrade to meet new scanning needs in the future. And no matter which option you choose, you can expect the superior speed and performance that have made Zebra the world's leader in bar code scanning — including the ability to capture even damaged and poorly printed bar codes on the first try.

With the 8 megapixel camera, workers can easily capture indisputable proof of condition. Add a geostamp to photos with the GPS function to embed proof of location in a photo, serving as undeniable proof of service or proof of delivery. And service technicians can capture a photo or video and transmit it to a product expert to get the onsite support they need to complete more repairs on the first visit.

1D/2D/GPS/1D STACKED BAR CODES PHOTOS/ VIDEOS/LF, HF AND UHF RFID/ WI-FI/HSPA+*

Whether you need RFID now or in the future, your Workabout Pro 4 is ready to support any RFID need. Complete RFID support includes LF, HF and UHF, with your choice of the UHF antennas that will best support your RFID application — linear or circular.

You can also choose the wireless support you need today and upgrade in the future. Start with 802.11a/b/g/n Wi-Fi, and simply add our HSPA+ WWAN internal module for cellular connectivity (cellular data only in the Americas). Add a GPS internal module to support location-based applications and geostamping. And if your Wi-Fi wireless environment is challenging, the GPS internal module also provides diversity antennas to improve Wi-Fi range and performance.

*Data only in the Americas

A BRAND YOU CAN TRUST.

20+ years and 400,000+ Workabout Pro mobile computers shipped around the globe.

When you choose the Workabout Pro 4, you choose a brand you can trust. The Workabout brand has been serving businesses around the world for over 20 years.

Every day, Workabout Pro mobile computers are helping businesses all around the world boost efficiency and improve customer service.

RUGGED, READY FOR YOUR MOST DEMANDING ENVIRONMENTS.

You have workers who spend the day indoors as well as outside. That's why the Workabout Pro 4 was designed to thrive in both. With its robust 6 ft./1.8 m drop specification, IP65 sealing and a wide temperature range, workers can drop the Workabout Pro 4 on a concrete floor or asphalt road, use it in dusty areas, out in heavy rain, freezing cold and extreme heat — no problem. The result is a rugged mobile computer that can be put to work in so many different working environments.

You can use it on the production line and the warehouse floor inside a manufacturing plant for line-side replenishment, picking, put-away and shipping. Use it out in the yard to streamline vehicle maintenance. Use it in the backroom of a retail store to manage inventory. Use it in rail yards, ports and out on delivery routes to capture proof of delivery, proof of condition, proof of location or proof of pickup. Even government agencies can use the Workabout Pro 4 to deliver emergency services to citizens, streamline and error-proof the ticketing process and more.

BLAZING DESKTOP- STYLE APPLICATION PERFORMANCE — ON A MOBILE DEVICE.

When it comes to running applications on a mobile device, it's all about performance. Your workers need instant screen refresh rates to maximize productivity — and minimize worker frustration. The Workabout Pro 4 offers the memory, processing power and wireless speeds required to deliver, with double the RAM, triple the Flash and nearly double the processing power of the prior generation, the Workabout Pro 3. Every Workabout Pro 4 offers 802.11a/b/g/n Wi-Fi support with an optional diversity antenna for better range and throughput, as well as an optional UMTS/HSPA+ module that can be added at any time, ensuring that your workers have the speed they need inside and outside the enterprise walls.

EASY TO USE AND ALWAYS COMFORTABLE.

Different applications require different types of data — but in order to maximize worker productivity, data entry must be simple. That's why we offer a choice of alphanumeric, QWERTY or numeric keypads. Since different jobs require different form factors to deliver maximum comfort, we offer four different styles. A compact and light “short” model works with the QWERTY or numeric keypads. A “long” model accommodates the full alphanumeric keypad. On the fly, users can attach a pistol grip accessory to either the long or short model to bring gun-style ergonomics and comfort to scan intensive tasks. And no matter which model you choose, the large 3.7 in. VGA extra bright display is easy to see — indoors and out in the bright sunlight.
